

Mammals

A mammal is a warm-blooded vertebrate animal. It breathes air, grows hair or fur, and nourishes its young with milk.

1

There are three types of mammals:
Monotremes, Marsupials,
and Placentals.

2

Monotremes are egg laying mammals. They are the most rare type of mammal.

3

Platypus

4

Echidna

5

Marsupials are mammals that are born not completely developed. They continue to grow in a pouch on the mother's belly.

6

Kangaroo

7

Opossum

8

Koala

9

Placental mammals develop a placenta to give nutrients and filter waste from the blood of the mother and that of the fetus.

10

Human

11

Dolphin

12

Pig
